

Software Escrow Solutions

Working Together to Assure Your Business Continuity

At **Dyalog Ltd**, we value our customers and work hard to deliver software solutions that meet your key business requirements and build strong relationships based on trust.

We recognise that we have a responsibility to help you ensure the long-term performance and availability of your Dyalog-based software and, ultimately, to assure your business continuity.

That's why we have arranged for Escode – the global leader in software escrow – to provide you with optional business continuity protection through their escrow solutions.

Escode's software escrow solutions protect 16,000 organisations around the world from unforeseen disruptions related to their development, supply, and use of business-critical applications. As a trusted partner, Escode safeguards access to the vital source code and digital assets that make up those applications - ensuring business continuity, enabling innovation, and protecting software investment. With over 40 years of industry experience, Escode has earned a reputation synonymous with trust and reliability.

Under the terms of your escrow agreement with Escode, we will supply them with a copy of our source code, which they will hold securely on your behalf. This will be updated each time we issue a new version of Dyalog, ensuring that the source code of the new version is available should the need arise. In the unlikely event that we ever become unable to meet our contractual obligations, Escode will release the source code to you, allowing you to maintain and correct your software without disruption.

To learn more about software escrow and the process of establishing your escrow agreement, please contact Escode using the contact details below.
